No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                           Ś
                                                                                                                                                                                                                                  CC The present invention relates to novel human secreted proteins (ABR54278-ACC62528). The proteins CC ABR64331) and their coding sequences (ACC62475-ACC62528). The proteins CC and their coding sequences are useful for treating, preventing, CC diagnosing and/or prognosing neoplastic diseases, blood disorders, CC cardiovascular disorders (e.g. cardiomyopathy, hypertension, controlatics, asthma), endocrine disorders (e.g. lung cancer, pneumonia, CC bronchiolitis, asthma), endocrine disorders (e.g. Addison's disease, CC cushing's syndrome, hyperpituitarism, pituitary dwarfism, acromegaly, CC thyroiditis), reproductive system disorders (e.g. Addison's disease, CC golycystic ovary syndrome), infectious diseases caused by bacteria, CC fungal, viral, parasitic, protozoal, and/or blood-related disorders and CC infections, leukopaenia, leukaemias, arthritis, asthma, autoimmune CC diseases, remanatoid arthritis, immune deficiency, psoriasis, CC disease, gout, osteoporosis, arrhythmia, angina, prostate cancer, renal CC disease, pout, osteoporosis, arrhythmia, angina, prostate cancer, renal CC disease, vertical attention deficit disorder, obsessive compulsive CC schizophrenia, attention deficit disorder, obsessive compulsive CC useful for stimulating epithalial cell proliferarion and basal CC keratinocytes for wound healing, and to stimulate hair follicle cc production and healing of dermal wounds
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    haemostatic; antidiabetic; antiallergic; antigout; antiarrhythmic; antianginal; nephrotropic; neuroleptic; neuroprotective; nootropic; antiparkinsonian; tranquiliser; anorectic; antiuleer; heparotropic; dermatological; gene therapy; neoplastic disease; blood disorder; cardiovascular disorder; respiratory disorder; cancer; endocrine disorder; reproductive system disorder; infection, arthritis; asthma; autoimmune disease; immune deficiency; psoriasis; diabetes mellitus; allergy; paget's disease; gout; osteoporosis; renal disorder; Alzheimer's disease; parkinson's disease; schizophrenia; attention deficit disorder; obsessive compulsive disorder; wound healing;

disease, gout, osteoporosis, arrhythmia, angina, prostate cancer, redisorders, urolithiasis, Alzheimer's disease, Parkinson's disease, schizophrenia, attention deficit disorder, obsessive compulsive pneumonia, obessity, goiter, ulcerative colitis, hepatitis. They are useful for stimulating epithelial cell proliferation and basal keratinocytes for wound healing, and to stimulate hair follicle
                                                                                                                                                                                                                                                                                                             The present invention relates to novel human secreted proteins (ABR54278 ABR54331) and their coding sequences (ACC62478-ACC62528). The proteins and their coding sequences (ACC62478-ACC62528). The proteins and their coding sequences are useful for treating, preventing, diagnosing and/or prognosing neoplastic diseases, blood disorders, cardiovascular disorders (e.g. cardiomyopathy, hypertension, reprintory disorders (e.g. lung cancer, pneumonia, hypotension), respiratory disorders (e.g. lung cancer, pneumonia, bronchiolitis, asthma), endocrine disorders (e.g. Addison's disease, Cushing's syndrome, hyperpituitarism, pituitary dwarfism, acromegaly, thyroiditis), reproductive system disorders (e.g. premenstrual syndrome, polycystic ovary syndrome), infectious diseases caused by bacteria, fungal, viral, parasitic, protozoal, and/or blood-related disorders and infections, leukopaenia, leukaemias, arthritis, asthma, autoimmune diseases, rheumatoid arthritis, immune deficiency, psoriasis, haemophilia, diabetes mellitus chieffic archief arc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel human secreted polypeptides and polynucleotides for diagnosing and treating neural, immune system, muscular, reproductive, gastrointestinal cardiovascular, renal, proliferative disorders and cancerous diseases.
                                                                                 Sequence 1804 BP;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention
                                                                                                                                                                                                                                  New isolated nucleic a

Commember of the fucosyltransferase family comprising: (a) nucleotide compressing the fucosyltransferase family comprising: (a) nucleotide comprising fragment of Si or S3; (c) encoding a polyophide (II) comprising a fully defined sequence S2 (AAM4795) of 492 amino acids or its fragment; or (d) encoding naturally occurring allelic variant of S2. (c) has cytostatic, antitumour, antiatherosclerotic, hypotensive, cantitumour, antiatherosclerotic, hypotensive, comprising fall, antidayrid, antidabetic, antiarthritic, comprising fall, antidayrid, antidabetic, antiarthritic, compressive, anticallergic, antiatherosclerotic, hypotensive, compressive, anticallergic, antiatherosclerotic, hypotensive, compressive, anticallergic, antiatherosclerotic, nephrotrophic, dermatological, antidayridic, vulnerary, haemostatic, virucide, compressive, analgesic, antiatherosclerotic, mephrotrophic, compressive, and (II) are useful for treating proliferative and/or contitorovulsant, analgesic, anorectic, metabolic and immunomodulator anticorvulsant, analgesic, anorectic, metabolic and immunomodulator carcinogenesis, the liver, including rodular hyperplasia and accolorectal carcinogenesis, carcinogenesis, carcinogenesis, carcinogenesis, car

The invention relates to an isolated 32132 nucleic acid (I), encoding member of the fucosyltransferase family comprising: (a) nucleotide sequence having 80% identity to sequence S1 (ABA05333) or S3 (ABA0533 (b) comprising fragment of S1 or S3; (c) encoding a polypeptide (II) comprising a fully defined sequence S2 (AAM47905) of 492 amino acids its fragment; or (d) encoding naturally occurring allelic variant of
                                                                                                                                             Claim 1; Page 105-106; 125pp; English.
                                                                                                                                                                                      Novel isolated 32132 nucleic acid encoding 32132 polypeptide, a novel member of fucosyltransferase family, useful for treating atherosclerosis, multiple sclerosis, acute glomerulonephritis, Raynaud's disease, pain.
                                                                                                                                                                                                                                                                                                                                                                                                                28-APR-2000;
                                                                                                                                                                                                                                                                                                                                                                                                                                                         27-APR-2001; 2001WO-US013805
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          WO200183721-A2

CC (I) has cytostatic, antitumour, antiatherosclerotic, hypotensive,
CC antiarrhythmic, vasotropic, antidiabetic, antiarthritic,
CC immunosuppressive, antithyroid, antiulcer, antiinflammatory,
CC ophthalmological, antidialregic, antiasthmatic, nephrotrophic,
CC dermatological, antidiarrheic, vulnerary, haemostatic, virucide,
CC antibacterial, nootropic, neuroprotective, antiparkinsonian,
CC antiorovulsant, analgesic, anorectic, metabolic and immunomodulator
CC activity. (I) and (II) are useful for treating proliferative and/or
CC differentiative disorders of the colon, including adenoma and colorectal
CC carcinogenesis, the liver, including nodular hyperplasia and adenomas,
CC breast, including epithelial hyperplasia and sclerosing adenosis, lung,
CC including bronchogenic carcinoma and neuroendocrine tumour. The
CC disorders such as acute promyeloid leukaemia, acute myelogenous
CC disorders such as acute promyeloid leukaemia, cute myelogenous
CC diseases, disorders of blood vessels, immunological disorders such as
CC disbetes mellitus, arthritis, ulcerative colitis, Crohn's disease,
CC asthma, kidney disorders e.g., polycystic kidney disease, acute
CC glomerulonephritis, colon disorders, disorders of liver such as disorders
CC associated with accumulation of fibrous tissue, hepatocellular necrosis
CC associated with accumulation of fibrous tissue, hepatocellular necrosis
CC multiple sclerosis, metabolic or pain disorders. (I) can be used in gene
CC therary

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       cc recombinant production of a polypeptide of the invention; an antibody cagainst a polypeptide of the invention; an amethod of detecting polynucleotides or polypeptides of the invention; and methods of coloring and methods of polypeptide of the invention. The climatery discloses methods of peventing, treating or ameliorating a medical condition; kits comprising polynucleotide probes convention, methods for the intentification of compounds that modulate the capturession or activity of the polynucleotide and/or polypeptide; and 767 cc contig sequences corresponding to the cDNA sequences of the invention (ADC31861-ADC32627) and the polypeptides encoded by the contigs (ADC32628 capture) and the polypeptides of the invention are constituted in diagnostics, drug screening, forensics, gene mapping, in the classification of mutations responsible for genetic disorders or other traits, for assessing biodiversity, and in producing many other traits, for assessing biodiversity, and in producing many cher traits, for assessing biodiversity, and amino acid sequences. They are climated the products dependent on DNA and amino acid sequences. They are climater for treating diseases such as parkinson's disease, Alzheimer's cdisease and other neurodegenerative diseases, anaemia, platelet considers, wounds, burns, ulcers, osteoporosis, autoimmune diseases or concer. The nucleic acids may also be used as hybridisation probes or concer. The nucleic acids may also be used as hybridisation probes or concer. The nucleic acids may also be used as hybridisation probes or concer. The nucleic acids may also be used as hybridisation probes or concer. The nucleic acids may also be used as hybridisation probes or concer. The nucleic acids may also be used as hybridisation probes or concer. The nucleic acids may also be used as hybridisation probes or concern the nucleic acids may also be used as hybridisation. The polypeptides care also useful in

The present invention relates to a new receptor and membrane-associated CC protein (REMAP). The polypeptide, polynucleotide and agonist are useful CC for treating a condition associated with decreased expression of CC functional REMAP. The antagonist is useful for treating a disease cassociated with overexpression of functional REMAP. The antagonist is useful for treating a disease cassociated with overexpression of functional REMAP. The anti-REMAP cantibody is useful for diagnosing a condition or disease associated with the expression of REMAP. These polypeptides, polynucleotides, agonists can an antagonists are particularly useful for diagnosing, treating or preventing cardiovascular (e.g. atherosclerosis, hypertension, aneurysms, compestive heart failure, angina pectoris, or ischaemic or rheumatic compestive heart failure, angina pectoris, or ischaemic or rheumatic composed of the promobilist of the condition of the conformal disease, peptic ulcer or complysema or bronchitis) gastrointestinal (e.g. nausea, peptic ulcer or composed or hyperlipidemia), autoimmune/inflammatory (e.g. anaemia, cashina, gout, panoreatitis or Crohn's disease, neurological (e.g. asthma, gout, panoreatitis or Crohn's disease, neurological (e.g. anaemia, stroke, Alzheimer's disease, creutzfeldt-Jakob disease, camietia), metabolic (e.g. Addison's disease), developmental (e.g. cushing's syndrome), endocrine or cell proliferative disorders (e.g. cancers including adenocarcinoma, leukamenia, lymphoma, myeloma or compositional composition or cell proliferative disorders (e.g. concers including adenocarcinoma, leukamenia, lymphoma, myeloma or concers including adenocarcinoma, leukamenia encodes a human REMAP protein concers including adenocarcinoma, leukamenia encodes a human REMAP protein concers including adenocarcinoma, leukamenia encodes a human REMAP protein concers including seent nucleic acid sequence encodes a human remarkament concerning and sequence encodes a human remarkament concerning and sequence encodes a human remarkament co

                                                                                     Ş
                                                                                                                                                                                                   CC related complex; stimulates chondrocyte growth, thus they can be used to cenhance bone and periodontal regeneration and aid in tissue transports or combine grafts; prevents skin aging due to sunburn by stimulating combine transports or combine they can be used to cerativate hair-forming cells and promotes melanocyte growth; stimulates combination with other cytokines; maintains organs before transplantation or for supporting cell culture of primary tissues; combination with other cytokines; maintains organs before cransplantation or for supporting cell culture of primary tissues; complete tissue of mesodermal origin to differentiate in early embryos; complete tissue of mesodermal origin to differentiate in early embryonic stem cells, besides, haematopoietic lineage; modulates mammalian characteristics, such as, body height, weight, hair colour, eye colour, compentate surgery); modulates mammalian metabolism; changes mammal's metal state or physical state by influencing biorhythms, caricadic rhythms, captesion, tendency for violence, tolerance for pain, reproductive capabilities, hormonal or endocrine levels, appetite, libido, memory, or stress; increases or decreases storage capabilities, fat content, lipid, components. This sequence encodes a novel human musculoskeletal system components. This sequence data for this patent did not form part of the printed specification, but was obbained in electronic format directly
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 20-OCT-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          831
```

The invention relates to 971 novel human cDNA sequences (ADC29919-ADC30889) and the polypeptides they encode (ADC30890-ADC31860). The invention also relates to nucleic acid sequences over 99% identical the novel human cDNAs. The invention additionally encompasses expresevectors and host cells comprising a nucleic acid of the invention; t

The invention relates to 971 novel human cDNA sequences (ADC29919-ADC31860). The ADC30889) and the polypeptides they encode (ADC30890-ADC31860). The invention also relates to nucleic acid sequences over 99% identical with the novel human cDNAs. The invention additionally encompasses expression vectors and host cells comprising a nucleic acid of the invention; the recombinant production of a polypeptide of the invention; an antibody

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                cc against a polypeptide of the invention; a method of detecting polynucleotides or polypeptides of the invention; and methods of cidentifying a compound which binds to a polypeptide of the invention. The cidentifying a compound which binds to a polypeptide of the invention. The cinvention further discloses methods of peventing, treating or a method in the invention; and polynucleotide probes cand/or monoclonal antibodies for carrying out the methods of the compounds that modulate the conting sequences corresponding to the cDNA sequences of the invention conting sequences corresponding to the cDNA sequences of the invention conting sequences, drug screening, forensies, gene mapping, in the custion in diagnostics, drug screening, forensies, gene mapping, in the custion in diagnostics, drug screening, forensies, gene mapping, in the cidentification of mutations responsible for genetic disorders or other cases and products dependent on DNA and amino acid sequences. They are consisted for treating diseases such as Parkinson's disease, Alzheimer's consisted for treating diseases such as Parkinson's disease, Alzheimer's conscers. The nucleic acids may also be used as hybridisation probes or concers. The nucleic acids may also be used as hybridisation probes or concers, wounds, burns, ulcers, osteoporosis, autoimune diseases or concers, and in the recombinant production of a protein. The polypeptides are also useful in generating antibodies, as molecular weight markers, con and as food supplements. The present sequence represents a human contig sequence used in an example of the invention. Note: The sequence data for this patent did not form part of the princed specification, but was for spatent did not form part of the princed specification, but was for the polypeptides of the invention.
                                                                                                                                                                                                                                                                          멂
                                                                                                                                                                                                                                                                                                             S
                                                                                                                                                                                                                                                                                                                                                       片

Novel human polypeptides and polynucleotides useful for diagnosing, preventing and treating cardiovascular disease, neurodegenerative, hyperproliferative disorders and disorders related to organ transplantation.

English

CC designated ORF (open reading frame) 1-4534 novel human proteins CC designated ORF (open reading frame) 1-4534, and sequences ABN75054-CC ABN79587 represent cDNAs encoding them. The invention also encompasses CC polypeptides at least 80% identical to the ORF1-ORF4534 (collectively CF referred to as ORFX) proteins, polymucleotides at least 85% identical to the ORF1-ORF4534 (collectively CF CRYX nucleic acid sequences, vectors and host cells comprising ORFX CC polymucleotides, the recombinant production of ORFX proteins, antibodies of polypeptides, methods of screening for modulators of ORFX proteins, antibodies of polypeptides, methods of screening for modulators of ORFX proteins and cc polypeptides, methods of screening individuals for a predisposition to an ORFX proteins of the invention have a wide crange of biological activities, such as cytokine, cell proliferation, tested growth, angiogenesis, activin on inhibin activity, chemotactic/ CC receptor/ligand, antiinflammatory activity, tumour inhibition activity, chemotactic/ CC receptor/ligand, antiinflammatory activity, tumour inhibition activity, chemotactic/ CC receptor/ligand, antiinflammatory activity, tumour inhibition activity, chemotactic/ CC receptor/ligand, and antibodies may be used in the treatment of cancers, complete acids and antibodies may be used in the treatment of cancers, concleic acids and antibodies may be used in the treatment of cancers, constitution and other pathogens. ORFX mucleic acids may adapt tumours, and confidency in the pathogens of proteins, and confidency in the detection of ORFX genomic sequences of source of primers and probes, in the detection of ORFX genomic sequences of sequences, in the detection and other service set of seases caused by viral, bacterial, confidency in the pathogens of the foreign of ORFX proteins may also be used as a cc source of primers and probes, in the detection of ORFX genomic sequences of mucleic acids may adapt the function and or activity of ORFX which may be useful for studying the functio

The invention relates to 971 novel human cDNA sequences (ADC29919-CC ADC2988) and the polypeptides they encode (ADC30890-ADC31860). The companion also relates to nucleic acid sequences over 99% identical with the novel human cDNAs. The invention additionally encompasses expression CC vectors and host cells comprising a nucleic acid of the invention; the recombinant production of a polypeptide of the invention; an antibody against a polypeptide of the invention; an enthod of detecting color invention further discloses methods of a polypeptide of the invention. The compound which binds to a polypeptide of the invention. The convention further discloses methods of peventing, treating or and/or monoclonal antibodies for carrying out the methods of the convention, methods for the identification of compounds that modulate the conversion or activity of the polypucleotide and/or polypeptide; and 767 contig sequences corresponding to the CDNA sequences of the invention are constilled. ADC32627) and the polypeptides of the invention are constilled in diagnostics, drug screening, forensics, gene mapping, in the contification of mutations responsible for genetic disorders or other traits, for assessing biodiversity, and in producing many other types of data and products dependent on DNA and amino acid sequences. They are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Ş

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 also used for treating diseases such as Parkinson's disease, Alzheimer's disease and other neurodegenerative diseases, anaemia, platelet disorders, wounds, burns, ulcers, osteoporosis, autcommune diseases or cancer. The nucleic acids may also be used as hybridisation probes or primers, and in the recombinant production of a protein. The polypeptides are also useful in generating antibodies, as molecular weight markers, and as food supplements. The present sequence represents a specifically claimed human CDNA sequence of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 2304 BP;
